Re: Cloud Operations / DevOps Engineering / SRE

To Whom It May Concern,

I am a Cloud Operations Engineer with 7+ years of experience delivering reliable, automated, and observable infrastructure across AWS and GCP at enterprise scale. My work spans production Kubernetes operations, multi-account cloud environments, infrastructure automation, and disaster recovery — with direct experience in the regulated gaming industry and an active **Nevada Gaming License**. I hold five cloud and security certifications and am currently pursuing the CKA.

CLOUD OPERATIONS & AWS INFRASTRUCTURE

At International Game Technology (IGT), I managed multi-account AWS environments supporting mission-critical gaming workloads serving millions of end users, maintaining 99.9%+ availability through proactive monitoring and structured incident response. I automated patch compliance across 200+ Linux and Windows EC2 instances using SSM Patch Manager — reducing patching cycle time by ~40% while maintaining full audit trails required in regulated environments. I also led AWS Well-Architected reviews across two HRI lenses and three workload assessments, identifying and remediating critical gaps across reliability, security, and cost pillars.

KUBERNETES & CONTAINER OPERATIONS

I led zero-downtime EKS cluster version upgrades in production using a Golden AMI strategy — pre-hardened node images, controlled drain/cordon rotations, and post-upgrade validation via CloudWatch Container Insights. Outside of work, I maintain a self-hosted bare-metal Kubernetes cluster on Proxmox with GitOps delivery via ArgoCD, Jenkins CI/CD, HashiCorp Vault for secrets management, event-driven autoscaling with KEDA, and a full Prometheus/Grafana/Loki observability stack. My infrastructure-as-code practice includes 11 single-responsibility Terraform modules with OIDC-based GitHub Actions CI/CD and zero static credentials.

MONITORING, RELIABILITY & DISASTER RECOVERY

I built CloudWatch alerting pipelines — custom alarms, log-based detection, and Container Insights dashboards — to surface infrastructure anomalies before they reached end users, directly reducing mean time to detection (MTTD) for production incidents. On the reliability side, I designed and validated disaster recovery strategies aligned to defined RTO/RPO targets, with quarterly DR testing cycles and runbooks structured for team-independent execution under pressure.

GCP ARCHITECTURE & PRE-SALES ENGINEERING

Prior to IGT, I spent nearly four years as a Pre-Sales Cloud Engineer at a GCP-focused consulting firm, architecting and delivering production-ready solutions for enterprise clients using Cloud Run, Pub/Sub, BigQuery, Cloud Functions, and CloudSQL. I built end-to-end Proofs of Concept validating serverless and real-time data pipeline architectures, reducing time-to-close on technical evaluations by ~30%. This background gives me a breadth across both major cloud platforms — deep AWS operations depth combined with hands-on GCP architecture experience.

GAMING INDUSTRY & REGULATORY BACKGROUND

My experience at IGT was not adjacent to gaming — it was inside it, operating infrastructure under the availability, compliance, and audit requirements of a global gaming company. I hold an active Nevada Gaming License issued by the State of Nevada Gaming Control Board, reflecting direct involvement in licensed gaming operations. For employers in the gaming, sportsbook, or regulated fintech space, this significantly reduces compliance onboarding overhead and demonstrates familiarity with the operational standards these environments demand.

I am based in Las Vegas, NV and open to onsite, hybrid, or remote opportunities. I welcome the opportunity to discuss how my background aligns with your team's infrastructure and operational goals.

Respectfully,

Elvis Rafael Gross Cardero
